

Wastewater Utility Green Power Report

September 2009

The microturbines at the wastewater plant generated 60,361 kWh (kilowatt hours) of electricity in the month of September.

This amount of electricity would have cost \$3,622.00 if it had been purchased from Duke Energy.

Producing this electricity on-site prevented the emission of approximately 43 metric tons of Carbon Dioxide.

This amount of carbon emissions is equal to that of 7 average cars for a **year**.

The City of West Lafayette's Wastewater Utility has pledged to generate 6% of its electricity on-site as Indiana's first wastewater plant to become an EPA Green Power Partner.
